

Counting Puzzles

Practice — ANSWER KEY

Orders and handshakes.

Think: Every handshake is counted twice if you count per person — so divide by 2.

1. Answers with the thinking.

1) 4 friends each shake hands with every other one exactly once. How many handshakes happen? **6**

$$\hookrightarrow 4 \times 3 \div 2$$

3) A shop sells 6 kinds of covers and 5 kinds of stickers. How many one-of-each combinations are there? **30**

$$\hookrightarrow 6 \times 5$$

5) A menu has 2 starters, 3 mains, and 2 desserts. How many different three-course meals are possible? **12**

$$\hookrightarrow 2 \times 3 \times 2$$

7) A shop sells 5 kinds of ice-cream flavors and 3 kinds of toppings. How many one-of-each combinations are there? **15**

$$\hookrightarrow 5 \times 3$$

9) A shop sells 3 kinds of hats and 6 kinds of scarves. How many one-of-each combinations are there? **18**

$$\hookrightarrow 3 \times 6$$

2) In how many different orders can you arrange 3 different medals on a rack? **6**

$$\hookrightarrow 3 \times 2 \times 1$$

4) A school-lunch menu has 5 starters, 4 mains, and 3 desserts. How many different three-course meals are possible? **60**

$$\hookrightarrow 5 \times 4 \times 3$$

6) A shop sells 3 kinds of covers and 7 kinds of stickers. How many one-of-each combinations are there? **21**

$$\hookrightarrow 3 \times 7$$

8) A menu has 2 starters, 2 mains, and 2 desserts. How many different three-course meals are possible? **8**

$$\hookrightarrow 2 \times 2 \times 2$$

10) A menu has 4 starters, 3 mains, and 4 desserts. How many different three-course meals are possible? **48**

$$\hookrightarrow 4 \times 3 \times 4$$
